UM-Series FUNCTION SPECIFIC METERS

UM-35-SG

Pressure or Load Cell Meter

An cost-effective meter to measure 4 wire pressure transducers, strain gauges and load cells. .

General Features

The UM-35-SG has two header selectable transducer output ranges of 2mV/V and 20mV/V. Both ranges can provide a full scale display of 2000 counts from the precision ratiometrically compensated 5V or 10V DC excitation provided by the meter. The meter accepts 4 Wire, and like all UM-Series meters, is easily scaled to display in engineering units such as psi, bar, kbar, kpa, feet, lbs, and tons.

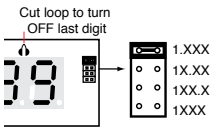
Calibration Procedure

1. Select the appropriate position on the INPUT RANGE SELECT Header, to correspond with the mV/V output of the transducer being used.
2. Connect the transducer to the UM-35-SG as shown in the connection diagram.
3. With no pressure or load being applied to the transducer, adjust the ZERO pot so that the display reads 000.
4. Apply a known input, and adjust the SPAN pot until the meter displays the required reading for the pressure or load being applied.
. The UM-35-SG meter is now calibrated and ready for use.

Decimal Point Selection

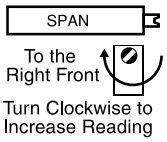
Decimal selection is made by moving the jumper to the indicated position on the header for the decimal required on the front of the display board.



Decimal Select Header

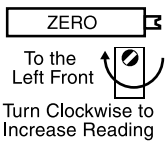
To open meter, insert a flat head screwdriver or similar instrument in both slots on the side of the cover and pry open. The UM-Series meters slide out from the front of the case as a complete assembly.

Signal Conditioning Components



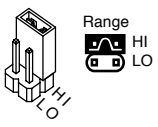
SPAN Potentiometer (Pot)

The 15 turn SPAN pot is always on the right side (as viewed from the front of the meter). Typical adjustment is 100% of the input signal range.



ZERO Potentiometer (Pot)

The Optional ZERO pot when installed is always to the left of the SPAN pot (as viewed from the front of the meter). Typically it enables the displayed reading to be offset ±100 counts.



Span Pot Adjustment Range Header

Low : 0-1000 Counts

Hi : 1001-1999 Counts

Optional Face Plate Descriptors

To customize the face plate, clear adhesive label containing various popular descriptors may be ordered. Choose the descriptor desired, peel off the adhesive backing and align the descriptor in the center right of the faceplate.

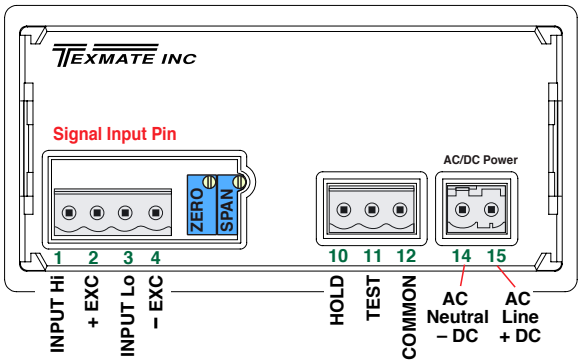
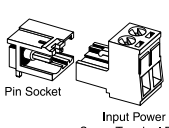
Connector Pinouts

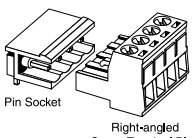


This meter uses plug-in type screw terminal connectors for all connections.

Connectors

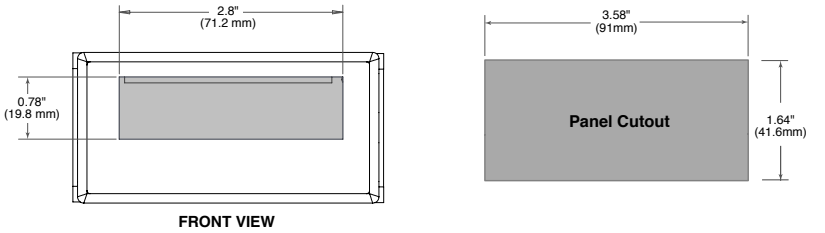
This meter uses plug-in type screw terminal connectors for all input and output connections. The power supply connections (pins 14 and 15) have a unique plug and socket outline to prevent cross connection. The main board uses standard right-angled connectors.

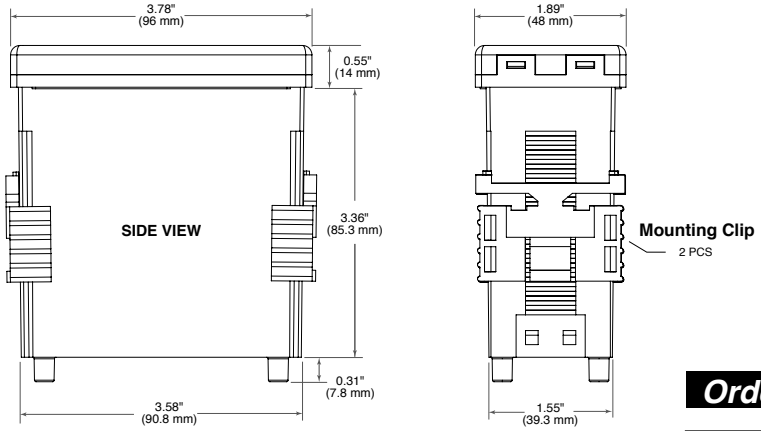


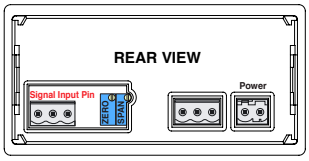


WARNING: AC and DC input signals and power supply voltages can be hazardous. Do Not connect live wires to screw terminal plugs, and do not insert, remove or handle screw terminal plugs with live wires connected.

UM Case Dimensions and Panel Cutouts







Clear Lockable Water-proof Cover

The clear lockable cover is designed to be dust and waterproof to NEMA-4X, IP65 standards. The assembly consists of a base and a cover with a cam hinge and key-lock fastening mechanism. An O-ring, or neoprene gasket forms a seal between the base and the panel. The cam hinge prevents the cover from closing when opened until pushed closed. The cover has a tapered recess that, when closed, forms a seal with a tapered spigot on the base. A key-lock employs a cam locking device to force the spigot into the recess, ensuring seal integrity. A safety catch keeps the cover closed even when the key is removed, and the keyhole can be used to attach a safety seal clip, preventing unauthorized opening.
